Subject: RE: City of Franklin Overflow Report

We'd like to correct the referenced overflow report in the below email.

For the New Highway 96 West and 11th Avenue overflow that began on February 20th and ended on February 26th, the estimated volume listed is incorrect. The correct volume should be 252,900 gallons, with a total of 6 exceedances.

Please let me know any questions.

Subject: City of Franklin Overflow Report

Please see the attached overflow report from those events beginning on February 20th, 2019. Because flows were so high during our assessment of the collection system, we were unable to send this within the 5-day timeframe.

Please let me know if you have any questions, thank you.
