

QUICK SET-UP GUIDE

1		Chock the trailer wheels.	8		After engine starts, return choke to "run" position.
2		Turn this switch on in order to raise/lower the tongue and level the trailer.	9		Let the generator run a few minutes before plugging in any cords.
3		Lower the stabilizer legs.	10		You need this cord if you will be running the air conditioner.
4		 Check fuel levels for oil and gas.	11		Turn on circuit breaker.
5		Turn choke on.	12		Turn on eco throttle (optional).
6		Turn fuel valve on AND turn engine switch on.	13		Leave the electric service on this setting (120V only).
7		Pull recoil cord.
